DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-4 and 10-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Furst (US Pat. 5,998,015).

In regards to claims 1, 3-4, 10-13, Furst teaches a plastic film, particularly polypropylene copolymer, comprising a polyolefin substrate, an intermediate layer, a siliconized layer (antibonding), and an adhesive layer (see abstract; Fig. 1).

In regards to claims 14-16, 20, the intermediate layer is composed of a flame-retardant lacquer, the silicon coating and intermediate layer can be composed of a number of individual layers (see Fig. 2; col. 1-6, 16-22), thus constituting adhesive layers in between other layers. Since Furst teaches the intermediate layer to be a lacquer layer, thus the lacquer layer would inherently have the barrier characteristics as presently claimed.

In regards to claims 2, 17-19, and 21, since Furst teaches the same laminate, the layers would inherently have the same properties, such as coefficient of thermal expansion and elongation, as those in the presently claimed invention. Moreover with respect to claims 17-19, it has been within the skill in the art that how an article is formed would have insignificant patentable weight in article claims.

Art Unit: 1711

In regards to claims 22-24, since Furst teaches the plastic films can be stacked without having the adhesive layer sticks to the silicone coating, the film would be a release film. With respect to the intended use of the film, it has been within the skill in the art that intended use would have insignificant patentable weight in article claims.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 5-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Furst as applied to claims 1 and 3 above, and further in view of Kurfman et al. (US Pat. 4,115,619).

Furst is as set forth in claims 1 and 3 above and incorporated herein.

Furst does not teach the film layer being formed of polyamide, polyethylene terephthalate, polyacrylonitrile, or a mixture thereof.

Kurfman teaches the use of a laminate made of thermoplastic resin, including polypropylene, polyamide, polyethylene terephthalate, polyacrylonitrile (see col. 3, ln. 23-42).

Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to have employed these thermoplastics, as taught by Kurfman, in the laminate of Furst, for the purpose of increasing heat resistance, melt fluidity, processability, chemical and impact resistance. This is because as Kurfman teaches these thermoplastics would

Application/Control Number: 10/680,013

Art Unit: 1711

be used as alternatives of each other and would have yielded the same results, as they are cheap

Page 4

and superior in structural properties.

Contact Information

5. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Thao T. Tran whose telephone number is 571-272-1080. The

examiner can normally be reached on Monday-Friday, from 8:30 a.m. - 5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, James Seidleck can be reached on 571-272-1078. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
